

NITmag Octahedral COOH 25nm

#51011415S & #51011415W & #51011415Y

STORE AT 4°C away from light. **DO NOT FREEZE**

Description

The 25nm magnetic nanoparticles are highly monodisperse carboxylated nano-octahedrons of magnetite. These nanoparticles can be employed as platforms for many applications such as magnetic separation, contrast agent MRI, hyperthermia, biosensors.

Technical Specifications

Particle Surface: -COO⁻ anions.

Particle Diameter: 25 ± 3 nm

Crystalline phase: Magnetite

Iron concentration : 0.71 mg/mL

Particle Concentration: 1.2×10¹³ particles/mL (1 mg/mL)

Molar Concentration: 20 nM

Appearance: Dark brown fluid aqueous solution

Solvent: Milli-Q water.

Scanning Electron Microscopy characterization

Suggested Application(s)

- Magnetic separation
- Biosensing
- Contrast agent MRI
- Magnetic hyperthermia
- Drug delivery

Ordering Information

Product name	Nanoparticles/ml	Quantity	Cat number
NITmag octahedral COOH 25 nm	1.2×10^{13}	1 ml	51011415S
NITmag octahedral COOH 25 nm	1.2×10^{13}	5 ml	51011415W
NITmag octahedral COOH 25 nm	1.2×10^{13}	10 ml	51011415Y

Product disclaimer

This nanoparticles® product is to be used for research purposes only. Unless stated in the documentation of on an individual product label, catalog or other information provided to the buyer, IT IS FORBIDDEN TO USE IT for different purposes, including but not limited to them: in vitro diagnostic, use in food, pharmaceutical purposes, medical purposes, or use in cosmetic products, neither for use in humans nor animals, nor for any commercial purposes. Please refer to www.nanoimmunotech.eu for the Material Safety Data Sheet of the product.
